### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Cindy Lynch on 06/06/07.

The application has been amended as follows:

**CANCEL Claims 27-37, 41 and 52-56**

**Claim 57, line 6:** after "between the elongated struts", insert --- *each of the ductile hinges being in the shape of a curved beam along a hinge length*, ---

### REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: There is no prior art alone or in combination that discloses all of the features of the claimed invention specifically an expandable medical device comprising elongated struts or beams, a plurality of asymmetrical ductile hinges, and having an abrupt transition between the cross sectional area of the elongated beams and the cross section area of the ductile hinges on both circumferential sides of the beams.

3. In Klein '020 for example, Figure 18B does not disclose an abrupt transition on both circumferential sides but rather discloses an abrupt transition on one side and a

Art Unit: 3731

gradual transition on the other. In Wijay '569, for example, Figures 5 and 6 do not disclose an abrupt transition on both circumferential sides of the beams and Figures 7 and 8 do not disclose hinges that are asymmetrically configured. Allen '455 and Sgro '365, for example, do not disclose hinges having an abrupt transition on both circumferential sides of the beams.

4. Regarding Lee '181, although it could be argued that Lee does in fact disclose an abrupt transition on both circumferential sides of the beams, Lee does not disclose ductile hinges having a first side surface placed in tension during compression of the device and a second side surface placed in tension during expansion of the device wherein the first side surface is smaller than the second side surface. For example if the ductile hinges were considered to be only parts 20 and 28, the surfaces would be the same length and the hinges would not be asymmetrical. If the ductile hinges were considered to be the entirety of the hinge including parts 20, 22 and 28, the outer surface would be the longer surface, which would be in compression during expansion rather than in tension during expansion. As to claim 57, Lee does not disclose hinges in the shape of a curved beam that are asymmetrical.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
